ICHTIOFAUNA DORZECZA RZEKI SKAWY

ICHTHYOFAUNA OF THE SKAWA RIVER DRAINAGE BASIN

Polska Akademia Nauk, Zakład Biologii Wód,
ul. Sławkowska 17, 31-016 Kraków

ABSTRACT

The water environment and ichthyofauna of 40 major and minor streams of the Skawa River drainage basin were investigated in 1984-1988. On the basis of fish species assemblages (groups) occurring there and the physiography of the terrain the streams were divided into four fish zones, A, B, C, D. Given fish species and groups were characterized. The biomass recorded in 1984-1988 was compared with that in 1973-1974.
